Accession agreement to the CitCom.ai Data Space

An organisation joins the CitCom.ai Data Space with this agreement. Its legal representative fills it in, signs it and uploads it in the onboarding portal. The agreement is concluded when the registration is approved (clause 6).

Participant

Legal name of the organisation	
Registered address	
Country	
VAT or registration number	
Legal representative (name)	
Position	
Email	

Roles the participant intends to take

See §3 of the rulebook. A participant can take several.

- ☐ Data provider: publishes datasets and offers them in the marketplace
- ☐ Service provider: publishes services (web apps, APIs, AI models) and offers them in the marketplace
- ☐ Consumer: acquires offerings and uses the data or services

Contact for operations and security incidents

Clauses

1. Parties

The parties are the organisation identified above (the **participant**) and the **CitCom.ai consortium**, the governance authority of the data space (R2.1). The **operator**, VRAIN of the Universitat Politècnica de València (R2.2), acts on behalf of the governance authority to approve registrations.

2. Object

The participant joins the data space and accepts its **rulebook**, including the policy classes, as the rules of its participation. The rulebook is published at https://citcomai-hub.github.io/rulebook/ and kept in https://github.com/CitComAI-Hub/citcom-ds-rulebook.

3. The rulebook in force

This agreement refers to the rulebook **in force at each moment**, not to a fixed version. The rulebook changes only as its rule R2.3 says: the governance authority approves the change, and it is announced to participants at least **30 days** before it takes effect, unless it fixes a security problem. A participant that does not accept a change can leave the data space before it takes effect (clause 8).

If this agreement and the rulebook differ, the rulebook prevails.

4. What the participant undertakes

The participant:

– issues credentials only to the people and software it controls, revokes them when that stops being true, and does not share them with other organisations (R3.3, R9.2);
– keeps the contact above up to date (R3.2);
– as a provider: has the right to offer each dataset, including the permission of its data rights holders; gives each dataset its correct category; offers no personal or confidential data; and keeps the conformance evidence of its connector and data (R6, R8.7);
– as a consumer: uses data and services under the terms of each offering, that is, its policy class and any additional requirements of its provider (R5.3, R7);
– tells the operator and the affected providers of any security incident or vulnerability affecting the data space within **72 hours** (R9.1).

5. What the governance authority and the operator undertake

The governance authority and the operator:

– decide on the registration and, if they deny it, give the reasons (R4.6);
– treat every participant the same way, and the operator does not use its position to access other participants' data or services (R2.5);
– announce changes to the rulebook as clause 3 says;
– tell the participant of vulnerabilities in software it runs that they learn of (R9.3).

6. Effect

The agreement is concluded, and the participation begins, when the governance authority or the operator on its behalf approves the registration in the onboarding portal. The participant is then added to the trust anchor of the data space (R4.1).

7. Pilot, as is

The data space is a pilot. Data and services are offered as is, on a best-effort basis, without availability or quality guarantees, unless an offering promises more (R1.3, R10.1). Liability between participants follows the rulebook and the terms of each offering, and otherwise the applicable law.

8. Leaving and exclusion

The participant can leave at any time by asking the operator. The governance authority can warn, suspend or exclude a participant that seriously or repeatedly breaks the rulebook (R4.2, R11.2). On leaving or exclusion the participant is removed from the trust anchor and its purchases are cancelled (R4.3). Obligations on data already received, such as attribution, confidentiality or deletion, continue after it leaves (R4.4).

9. Disputes

The parties first try to settle a dispute between themselves. If they cannot, the governance authority decides (R11.1).

10. Personal data

The personal data in this agreement and in the onboarding portal (names and contact details) is used only to manage the participation. Each party complies with the General Data Protection Regulation (EU) 2016/679 when it processes personal data under this agreement.

11. Duration

The agreement lasts until the participant leaves or is excluded.

Signature

For the participant, its legal representative, by hand or with an electronic signature.
